

## GEBCO\_2024 Grid – error in Arctic area north of approximately 70°N

There are artifacts in the GEBCO\_2024 Grid in the Arctic region, largely north of 70°N. The artifacts appear as lines/structure pointing towards the North pole. The artifacts occurred during the grid generation process. The image below shows a shaded relief image of the bathymetry of the area, illustrating the erroneous ‘texture’ in the grid in this region.
