

Bringing the Ocean into the Cloud

Timothy Kearns
GEBCO Science Day– Venice, Italy

October 7, 2013

OneOcean 

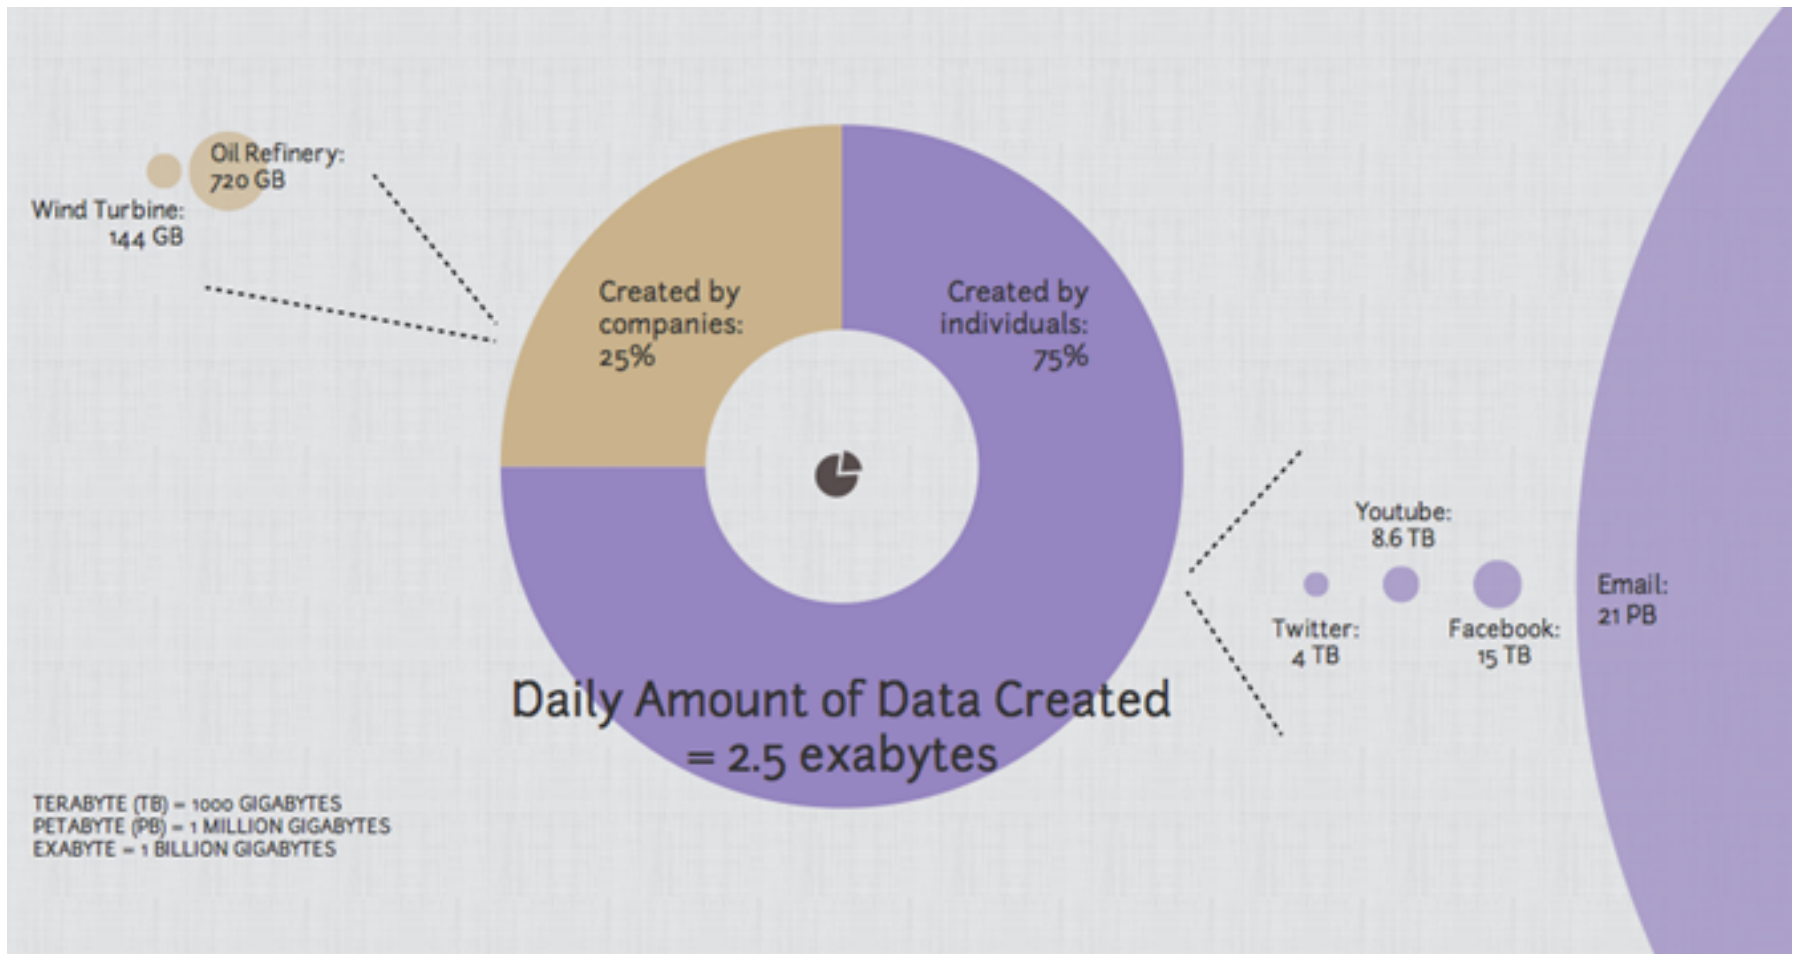

The problem with big data: it's big.

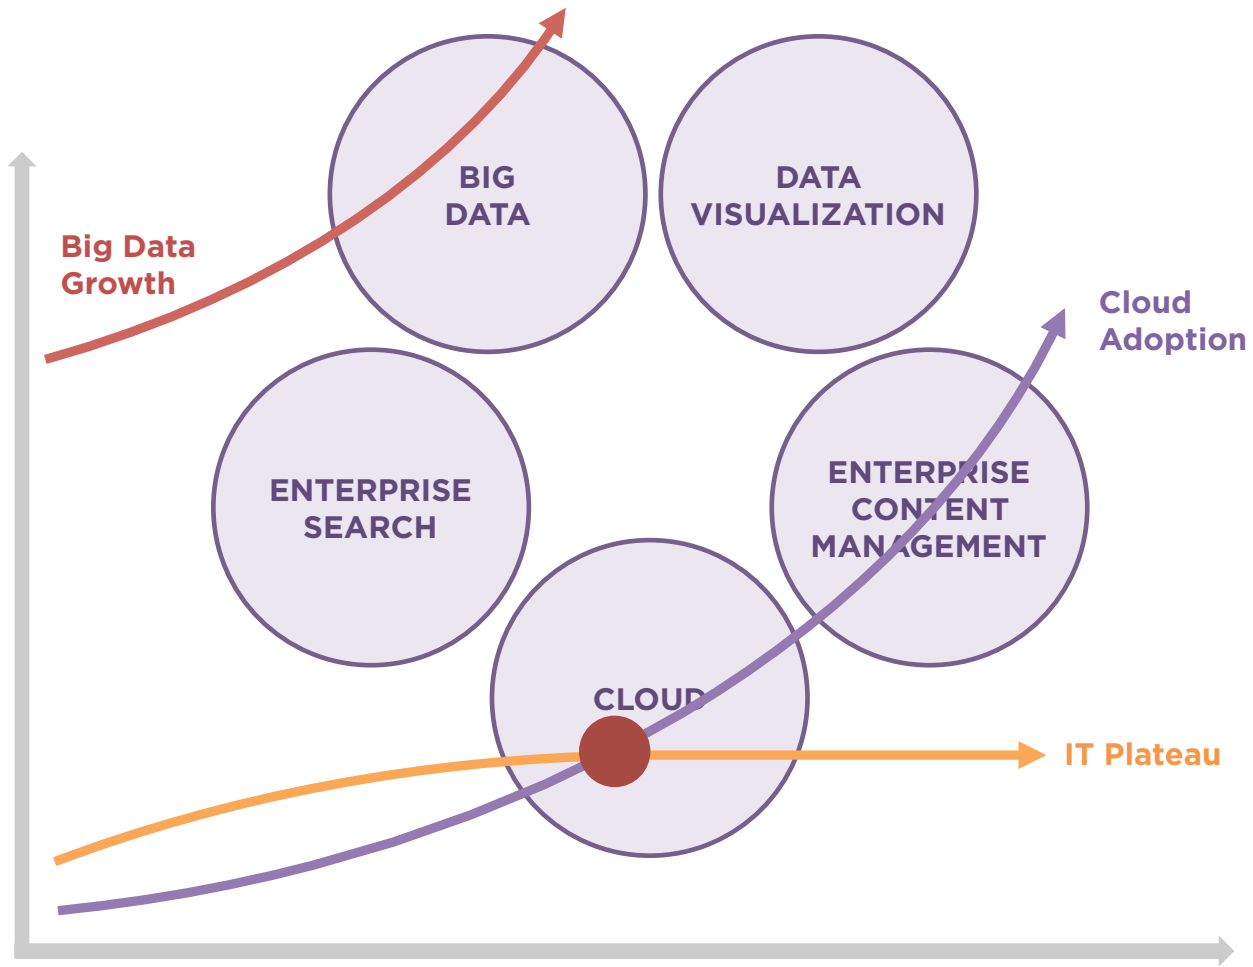

Big data is growing in volume and complexity, exponentially faster than our ability to manage it.

Valuable information stays locked away on hard drives and behind firewalls, much of it only used once and then forgotten.

the
big data problem
is not just a
data problem

Current amount of data created daily

99.5%

of newly-created data is
never analyzed

IDC + MIT Technology Review, June 2013

Software has attempted to evolve...

single beam 3D soundings models
combined grids
mid-water
shrinking resources

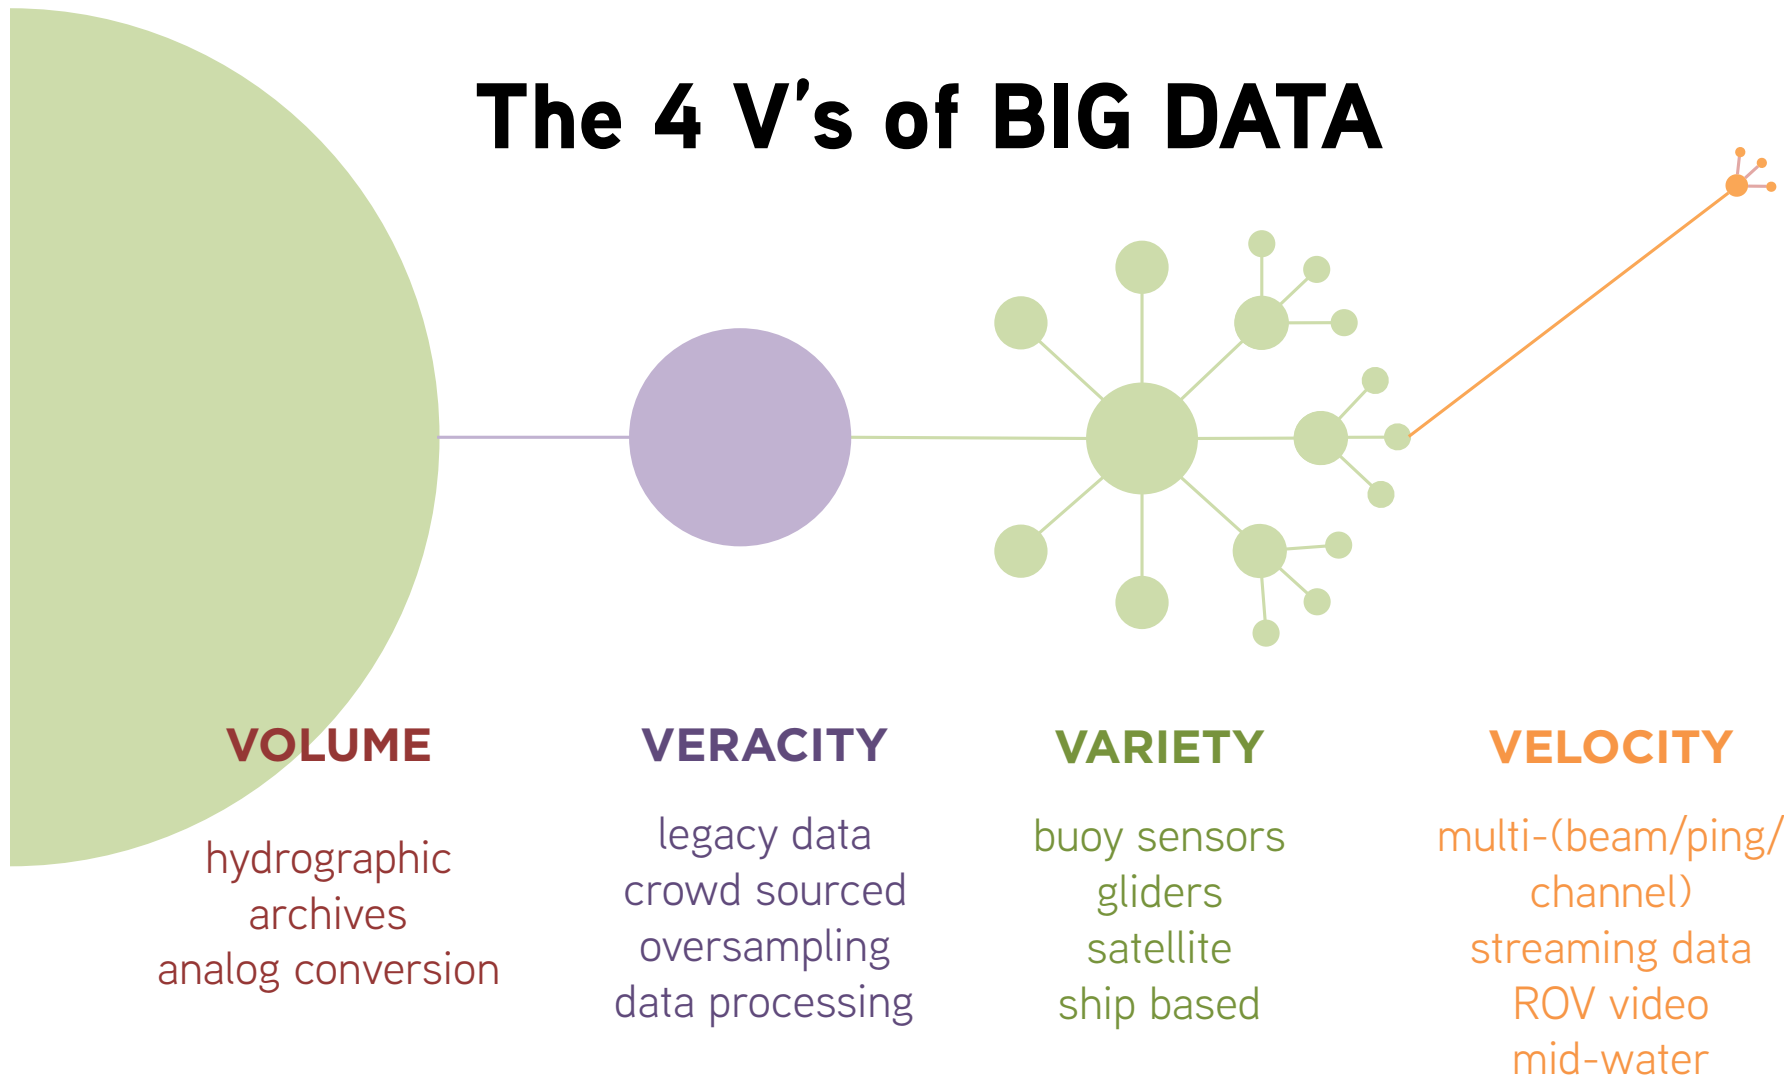

**it is impossible to
keep up.**

CUBE

interpolation

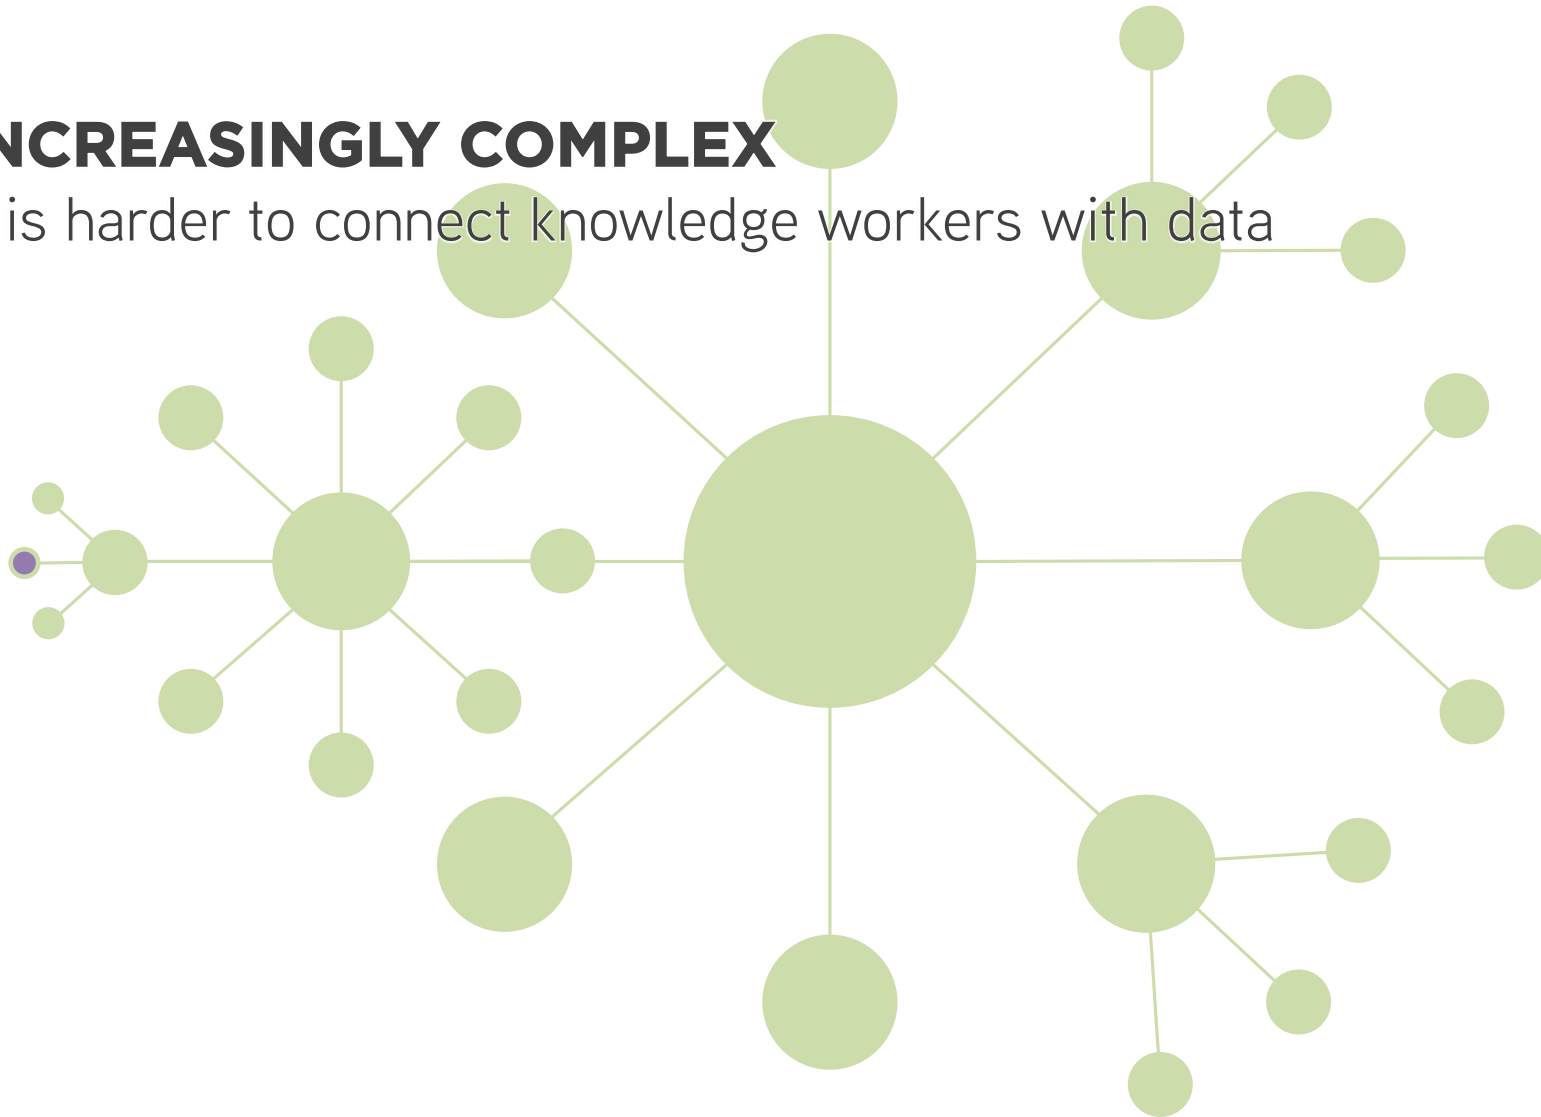

web services
ray tracing
sidescan
sonar
fieldsheets / fairsheets
backscatter

The 4 V's of BIG DATA

INCREASINGLY COMPLEX

it is harder to connect knowledge workers with data

Legacy approaches aren't making it easy.

ClipCard is linked to your source data,
but is only a fraction of the size.

ClipCard is a powerful gateway to ocean data.

Thank you.
(and so will your data)
